- S** - Seek and share knowledge
- T** - Train ourselves regularly to be updated
- O** - Own the problem
- N** - Nimble in action
- E** - Empathise to ensure we care

MONUMENTS

In our series of materials that are used or have traditionally been used in the making of monuments and memorials, we have looked at granite, marble, sandstone, limestone, bronze, copper and wood.

Throughout centuries of history, marble has been a popular choice for building monuments, statues and other stone markers. India has countless marble fountains and statues. Marble has been used extensively in buildings because of its beauty, availability and ease of sculpting of pillars, stairs and other statues by stone masons.

A visit to nearly any cemetery in America will show white and black marble tombstones with barely legible engraving. Without other records, the history of these graves could be lost over time. And while tombstones can be professionally restored, this typically only happens when a family member takes the time, effort and financial burden to do so.

Cemetery

The most common use of marble in memorials and monuments is in that of gravestones (tombstones or headstones). Since it can be easily shaped and engraved by skilled stone cutters and engravers into beautiful memorial pieces that can be found across the United States in cemeteries that date back as far as the 17th century. Unfortunately, as noted above, many of these marble tombstones have eroded over the years and become illegible.

In recent years, granite has replaced slate and marble as the top choice for gravestones in cemeteries. However, marble can still be a great choice for memorials of all types and newer processes and coatings can help marble to last for many years to come.

Aurastone has a wide range of memorial options available and can be personalized to include bronze emblems and portraits. The rich metallic beauty of bronze and the timeless durability of granite is absolutely maintained. Aurastone has created a wide variety of monuments and has made its mark around the world in capturing eternal memories.

Mausoleums

Aurastone faithfully helps you to design and convey the life you intend to memorialize by monuments or memorials, mausoleums or columbariums. We provide extensive varieties of options from Natural Stones with bronze finishes and varied colors specially designed to reflect the memory you wish to honour.

Famous Marble Monuments and Tombs

Marble has been used for thousands of years in buildings and memorials. Some of the most famous examples of marble structures include the Taj Mahal in India, and the Colosseum in Rome.

In the United States, marble can be found in most large cities adorning government buildings, post offices, and schools. One of the most famous marble buildings in the US is the Supreme Courthouse in Washington, D.C. which was built in 1935 and boasts a stark white façade.
